

HYPERSENSE BUSINESS ASSURANCE

Get 5G Business Assurance (BA) with HyperSense

Business Assurance technology must match the speed of business if it is to drive effective risk coverage across all lines of business.

The line of opportunities for has become dynamic with their entry into domains like banking, gaming, fleet management, and more. Additionally, 5G revenue opportunities are expected to come from the enterprise side of the business.

Is your enterprise ready for 5G (and beyond)?

First, operators must identify if they are currently satisfied with their existing revenue assurance and/or business assurance tool and capability. This means assessing whether the tool is agile, flexible, and adaptable in terms of operations, knowledge management and user experience – the key success factors of any business assurance system.

Second, BA tools must also align with Open Digital Architecture (ODA) for seamless interoperability in the new cloud ready future.

IS YOUR CURRENT BA TOOLING ACTUALLY SLOWING YOU DOWN?

Some of the key signs to watch out for are:

Long deployment cycles

Slow change request that does not match the required speed to market for new controls

New business opportunities need extensive customization

Lack of a domain databank; everything is based on discovery

Paying for functionalities that are barely used

Long and expensive upgrade cycles

Does not cater to B2B2x models

Dependence on vendors for scope expansion

SUBEX BUSINESS ASSURANCE ON HYPERSENSE

HyperSense automates the data discovery to insights journey, giving stakeholders the power of rapid decision-making. It helps BA teams

1

Improve deployment and amplify operational excellence with 100% DIY enablement.

2

Perform at scale with free, rolling, and value-adding upgrades.

3

Improve customization for existing and new business opportunities with a user-friendly and intuitive AI studio and comprehensive ML tooling.

4

Minimize total cost with user-controllable TCO, based on actual usage.

5

Roll out new controls rapidly with a toolkit approach and cloud-native auto scaling capability.

6

Enhance feasibility for scope expansion with end-to-end collaboration for consulting, tooling, and service offerings.

To find out more about these key benefits or learn about some of our other exciting initiatives, including the development of the largest library of operational controls available in the market, how we are leveraging RPA and more.
